

Suno Bat ki Baat

Hey! I am Bebo, a vegan Fruit Bat!
There are rumours linking bats to COVID-19, so I am here to clear the air!

20% mammals are bats
1411 bat species worldwide
128 bat species in India

BRIEF ABOUT ME

- I am not a bird - I am the only mammal that can fly
- I am a slow breeder and produce only about 2 babies/year
- Stop using the phrase "blind as a bat" coz I can see quite clearly, I also use sound to find my way in the dark and detect my prey
- I believe in non-violence and don't attack humans
- In case I bite you in self defense, get a rabies shot as a precautionary measure as you'd for a dog bite

I AM A HERO, NOT A MONSTER

We eat fruit, nectar or insects, so act as pollinators, seed dispersers and/ or pest controllers.

Some of my insect eating relatives can have ~1000 mosquitoes in a night, thus, protecting you from mosquito-borne diseases!

MY SUPER POOP (GUANO)

- My poop is one of the best natural fertilizers
- Several organisms in ecosystems with no sun light, such as heritage sites and caves, completely depend on my poop for survival
- My poop lying around doesn't cause any serious illness but can cause infections if it comes in direct contact. So while touching it please wear masks and gloves, as you'd do while handling any other poop. That's basic hygiene, my friend!

MY SUPER IMMUNITY

- I have super-immunity. Many viruses live inside me but don't make me sick
- We generally keep these viruses to ourselves but when humans destroy our habitats they come in my contact with these viruses.
- The new coronavirus is related to the viruses that live inside me but it did not come directly from me!
- I hear that scientists are trying to replicate my super-immunity in humans!

Killing me will not help you deal with COVID-19 or related diseases, it will only disturb the ecological balance and give rise to more animal-borne diseases. Alive, I'll help you make this planet great again!

Batman is a fictional character based on my superpowers - I am the real deal!
